SUMMARY

Recent Software Development graduate specializing in full-stack web architecture and database management. Combines practical experience deploying secure, user-focus web applications with strong, real-world leadership skills. Highly adaptable and self-directed, ready to deliver reliable technical solutions and drive project execution.

SKILLS

Languages: JavaScript, Python, C#, Java, SQL, HTML/CSS

Frameworks & Libraries: [Next.js](#), ReactJS, React Native, [Node.js](#), Tailwind CSS, Pandas

Tools & Platforms: Git/Github, RESTful API, Amazon Web Services, Microsoft Azure, Vercel, Figma

Concepts: Agile Project Management, OOP Principles, UI/UX Design, Software Analysis, Software Testing

EDUCATION

Diploma, Software Development

Graduated April 2026

Southern Alberta Institute of Technology

EXPERIENCE

Project Manager / Software Developer - SAIT | Sept 2025 - April 2026

Shift Focus - Capstone Project

- Led a team of 6 developers to create a full-stack staff scheduling application using ReactJS
- Managed agile sprints, weekly updates, and task tracking
- Configured and managed cloud infrastructure on AWS, including deployment, scaling, and resources
- Designed and implemented a CI/CD Pipeline to automate build, testing, and deployment workflows
- Led architectural decisions across the full stack, defining patterns for API design, database structure, authentication and cloud integration

Team Leader - Calgary, AB | June 2024 - Present

Scotiabank Theatre Chinook

- Supervised front-of-house operations, organizing staff assignments to keep the theatre running
- Trained and supported team members on their daily responsibilities and company service standards
- Tracked staff performance and wrote regular reports to provide constructive feedback to the team
- Monitored guest service metrics and resolved escalated customer concerns to maintain a positive experience

PROJECTS

Shift Focus - Capstone Project

Sept 2025 - April 2026

MySQL, Amazon Web Service, Clerk Authentication, ReactJS

- Engineered a full-stack, web-based staff scheduling application designed for small businesses
- Collaborated with a team of 6 developers using Agile methodologies and Github for version control
- Deployed and managed the application and database infrastructure using AWS (Elastic Beanstalk / RDS)
- Integrated Clerk for secure user authentication
- Coded core calendar components, developing availability and shift event logic to prevent scheduling conflicts

Smart Home Dashboard

January 2026

React, NodeJS, Raspberry Pi, REST API's

- Built a web-based dashboard to monitor and control smart home devices in real time
- Integrated Raspberry Pi hardware with a React frontend using REST API's for device communication
- Implemented real time music playback control with Spotify Playback API
- Created a standalone unit with 24/7 control of smart home devices
